# Introduction

## A. Executive Summary

This 2018-2019 Watermaster Report, developed by the Administrative Body and adopted by the Water Rights Panel, provides information on groundwater extractions, storage accounts, use of imported water and recycled water, replenishment operations, and the budget and finances of the Central Basin (Basin) Watermaster during the 2018-2019 administrative year (AY). This report complies with the provisions set forth in the Central Basin Third Amended Judgment (Judgment).

Overall, the Basin experienced an increase in active groundwater producers, rights holders that have extracted groundwater from the Basin within the past three years, including the current and previous two AY, from 63 to 73. Yet, overall groundwater extractions decreased by four percent when compared to the previous AY. The most significant distinction for the Basin during the 2018-2019 AY was rainfall. The Basin received an average of 19.01 inches of precipitation, which is a 138% of the normal average and a 77% increase from the previous year. The decrease in groundwater extractions may be attributed to the increase in rainfall. In addition, there was more than 6,000 acre-feet (af) of carryover conversion to storage. Furthermore, Watermaster expenses per af declined slightly in comparison to the previous AY.

The report is organized into Water Use, Water Supply, and Watermaster Costs and Budget sections. In addition, the report provides various tables and figures describing the narrated information.

## B. Background

The Central Basin Watermaster Service Area overlies approximately 227 square miles of the Basin in southeastern Los Angeles County. Figure 1 shows the location and boundaries of the Central Basin Adjudicated Boundary (Watermaster Service Area). The Watermaster Service Area is bounded by the Newport-Inglewood Uplift on the southwest, the Los Angeles-Orange County line on the southeast, and an irregular line that approximately follows Stocker Street, Martin Luther King Boulevard, Alameda Street, Olympic Boulevard, the boundary between the City of Los Angeles and unincorporated East Los Angeles, and the foot of the Merced Hills and Puente Hills on the north. Twenty-three incorporated cities and several unincorporated communities lie within the Watermaster Service Area. Groundwater from the Basin provides a substantial portion of the water supply needed by the residents, businesses, and industries in the area overlying the Basin.

More than 60 years ago, groundwater overdraft and declining water levels in the Basin threatened the area's groundwater supply and caused the intrusion of sea water into the aquifers in the southern part of the Basin. However, timely legal action, adjudication of the water rights, and formation of WRD halted the overdraft and prevented further damage to the Basin. Since that time, groundwater extraction from the Basin has been limited to the amounts set by a Superior Court Judgment and monitored by a Court-appointed Watermaster.

The first Judgment was finalized and signed in 1965 and it appointed the Department of Water Resources (DWR) as the Watermaster. Since its inception, the Judgment has been amended three times. The Judgment was first amended in 1980 to provide for a transition in the administrative year from a water year (October 1 to September 30) to a fiscal year (July 1 to June 30). The Judgment was amended for the second time in 1985 to modify the annual budget (\$20 minimum assessment) and exchange pool provisions. In addition, the second amendment modified carryover and overproduction provisions, defined carryover, and provided for exemptions for extractors of contaminated groundwater. The Third Amended Judgment was finalized on December 23, 2013. For the first time, the Court allowed Parties to have direct input into how the Judgment is administered and enforced. The Judgment confirmed the retirement of DWR as the Watermaster and created three separate bodies that assist the Court in the administration and enforcement of the provisions of the Judgment.

The first body is the Administrative Body, which administers the Watermaster accounting and reporting functions. The Water Replenishment District of Southern California (WRD) was appointed by the Court to fulfill this role.

The second body is the Water Rights Panel, which enforces issues related to the pumping rights within the adjudication. The Water Rights Panel is made up of seven water rights holders who are elected by other rights holders in the Central Basin. Members of the Water Rights Panel during the 2018-2019 AY included the City of Downey, Golden State Water Company, City of Lakewood, City of Long Beach, Orchard Dale Water District, City of Signal Hill and City of Paramount.

The third body is the Storage Panel, which is comprised of the Water Rights Panel and the WRD Board of Directors; together they review and approve certain groundwater storage efforts.

# Water Use

## A. Allowed Pumping Allocation Extractions by Parties

The Judgment limits the amount of groundwater each Party to the Judgment may extract annually from the Basin. This amount is known as the Party's Allowed Pumping Allocation, or "APA". The APA for each Party is listed in Table 1. Parties are required to report groundwater extractions to the Administrative Body each month (or quarterly for smaller producers). Appendix A lists, by Party, the volume of groundwater extracted each month from each active well in the Basin. Figure 1 describes the variation of groundwater production by three distinct production classifications: less than 500 acre-feet per year (afy), 500 to 2,000 afy, and more than 2,000 afy, during the 2018-2019 AY. In addition, Figure 2 illustrates the monthly water production (excluding non-consumptive use) for the 2018-2019 AY, which totaled 180,382.20 af, which is a 4% decrease from the previous AY.

To provide flexibility with regard to groundwater extractions, the Judgment contains provisions, such as the "One Year Carryover" (also known as "Normal Carryover"), which allows each Party to carry over into the succeeding administrative year a portion of its unused APA. Specifically, Parties are allowed to carryover unused rights up to the greater of:

- 60% of their APA plus or minus any leases with flex or 20 af, whichever is more, less the amount of water in a Party's storage account; or
- 20% of a Party's APA

This type of provision is necessary to meet unforeseen water demand. In addition, any unused Exchange Pool water, discussed in Section (I), is carried over into the following AY.

## B. Storage Transactions

The Judgment allows Parties with water rights to store water in the Basin for later extraction. Pursuant to Section III.A.(2) of the Judgment, Parties have the ability to convert normal carryover to storage upon payment of the Replenishment Assessment to WRD.

Table 2 describes storage accounting, including total carryover from the 2017-2018 AY, storage activity for the 2018-2019 AY (transfers, water put into storage, and water extracted from storage) and the total balance carryover into the ensuing AY. Table 3 lists quantities of water that were put into storage by each Party during the 2018-2019 AY. The total amount of water that was put into storage is 6,457.15 af, which is a 33% decrease in comparison to the previous AY. In addition, a total of 4,656.47 af was extracted from storage by three different Parties, which are listed in Table 4. This is a 71% increase in storage extractions when compared to the previous AY.

The Judgment also provides for the transfer of stored water between Parties. However, there were

no transfers of stored water during the 2018-2019 AY (Table 5).

Table 6 provides a six-year storage summary, 2013-2014 to 2018-2019 AY, including water put into storage, water extracted from storage, storage balance, and the available adjudicated storage capacity.

### **C. Regional Disadvantaged Communities Incentive Program**

Section II.H. of the Judgment contains provisions for the development of a Regional Disadvantaged Communities Incentive Program (RDCIP) that allocates 23,000 af of storage space for the use or benefit of Disadvantaged Communities (DAC) within the Central Basin. A DAC is defined as any area that is served by a water purveyor and consisting of one or more contiguous census tracts, which based upon the most recent U.S. Census data, demonstrates a median household income which is less than eighty percent (80%) of the median household income for all Census Tracts within the State of California. This program was developed by the Water Rights Panel during the 2014-2015 AY and approved by the Court in June 2015.

There were no requests for participation in the RDCIP in the 2018-2019 AY.

### **D. Total Extraction Right**

Parties with water rights have a total extraction right, which is the maximum amount of groundwater that can be extracted in any one year. In the Central Basin, Parties are allowed to extract up to 140% of the sum of their APA and leased water; carryover and stored water rights are not considered. For example, if a Party has an APA of 1,000 af, 400 af of stored water rights, and leases in an additional 200 af, their maximum yearly extraction would be calculated as follows:  $(1,000 + 200) \times 1.4 = 1,680$  af. Conversely, if the Party leased out 200 af, their maximum yearly extraction would be  $(1,000 - 200) \times 1.4 = 1,120$  af. Although each Party has a total extraction right, the Judgment does allow for overextractions under certain conditions. Overextractions are discussed in Section E (below). Parties may also extract more than their Total Extraction Right if approved by the Water Rights Panel.

### **E. Overextractions**

A Party may overextract by 20% of its APA or 20 af, whichever is greater. Anything beyond the allowable 20% of APA or 20 af, is considered to be in violation of the Judgment. When a Party overextracts in violation of the Judgment, Watermaster notifies the Party to resolve the overextraction issue. Under certain circumstances, a Party may overextract in a greater amount; however, prior approval must be obtained from the Watermaster. The overextraction must be reconciled in the following administrative year unless Watermaster concludes that making up the overextraction would create an unreasonable hardship for the Party. In such cases, Watermaster may adjust the requirement. For example, Watermaster may prorate the reduction in the Party's APA

over a period of up to five years.

During the 2018-2019 AY, six Parties had a combined cumulative overextraction of 24,589.70 af. Three Parties overextracted within the provisions of the Judgment and three Parties were in violation of the Judgment for the 2018-2019 AY. The State of California (CalTrans) is one of three Parties in violation of the Judgment. Since 1997-1998, CalTrans has pumped groundwater for dewatering beneath the 105 freeway in the cities of Paramount and South Gate. CalTrans had a cumulative overextraction total of 24,505.48 af. The other two Parties in violation of the Judgment, include Nanacy J. Furr by 0.08 af and Newark Group Inc. by 54.81 af. Table 7 lists overextractions by all Parties.

#### **F. Extractions by Non-Parties**

In the 2018-2019 AY there were no extractions by non-parties reported (Table 8).

#### **G. Extractions of Contaminated Groundwater**

A Party who is a water rights holder may petition WRD for a Non-Consumptive Water Use Permit (NCWUP) as part of a project to remediate or ameliorate groundwater contamination. If the petition is granted, the Party may extract the groundwater without counting against its production rights, so long as conditions of the Judgment are met. A non-Party may extract contaminated groundwater for cleanup purposes by partnering with a Party who obtains the NCWUP and then assigns it to the non-Party.

Table 9 lists current NCWUPs issued by WRD and the amounts of groundwater extracted under those permits. In the 2018-2019 AY there were 100.64 af of NCWUP extractions via six permits. Appendix A reports these extractions by well and month.

#### **H. Allowed Pumping Allocation Transfers**

Each year, APAs are transferred between Parties through leases (temporary transfers) and change of ownership (permanent transfers) transactions. Table 10 shows transfers of APAs through leases, specifically the parties involved, transaction type, amount, and recordation date. During the 2018-2019 AY there were 55 leases that totaled 30,273.75 af (38 leases with flex and 17 leases without flex). Leases with flex transfers both the pumping right and associated carryover rights to the lessee for the term stated within the lease agreement.

In transferring water rights, Parties must specify (1) the type of right (i.e., APA, normal carryover, or drought carryover), (2) the amount of right to the nearest 0.01 af, and (3) the period of the lease, if applicable. Moreover, all leases must be made on an administrative year basis and must be executed by the Parties and received by Watermaster no later than one month and 15 days

following the end of the AY in which the lease is effective.

Table 11 shows permanent transfers of APA and carryover. There were 5 permanent transfers of APAs that totaled 66.00 af (3 sales/APA transfers, 2 Normal Carryover transfers, and 0 Drought Carryover transfers).

The transfer of water rights must be documented accordingly. For example, when land is sold on which a water right has been developed, the Watermaster must receive a copy of the transfer document if the water right is also transferred. The water right does not automatically pass to the new land owner unless the transfer document specifies that the water right was transferred with the land. For the proper accounting of the water right, the transfer document must specify (1) the type of right (i.e., APA, normal carryover, drought carryover, or stored water) and (2) the exact amount of water right (s) transferred. Watermaster provides a template for a Deed of Water Rights – Permanent Transfer transaction on its website to ensure the information provided on the transfer document is sufficient.

Permanent water rights transfers have reduced the number of Parties (individual or entity that has a water right, privilege or obligation to the Judgment) from 508 in the 1966-1967 AY to 148, currently. Appendix B shows the succession of each Parties APA in the Basin. There were no changes in the number of Parties since the previous 2017-2018 AY. Current Parties to the Judgment are listed in Appendix C.

## **I. Exchange Pool**

The Judgment authorizes an Exchange Pool to provide additional water rights to Parties without sufficient water. If a Party's estimated water requirement for the following AY exceeds its total available water supply, that Party may purchase additional water from the Exchange Pool. Any Party wishing to purchase water from the Exchange Pool must file a request with the Watermaster before April 1. If no requests are received by April 1, the Exchange Pool will not operate in the following AY, and Watermaster will not process Exchange Pool forms. There were no requests for Exchange Pool water during the 2018-2019 AY (Table 12).

## **J. Status of Extraction Wells**

In the Basin there were 363 wells that reported extraction during the 2018-2019 AY, which is 11 more wells than the previous AY. The locations of the wells and their relative amount pumped are shown in Figure 1. There were no new extraction wells reported completed (Table 13) and no extraction wells reported destroyed (Table 14) in the 2018-2019 AY.

## **K. Meter Testing Program**

Accurate measurement of groundwater extractions is essential for the successful management of groundwater in the Basin. Therefore, Watermaster requires an operative water meter to be installed at each extraction well. It is the responsibility of each Party to ensure that its meter and test facilities are installed properly and are maintained in good working condition. It is the goal of Watermaster to test the water meter at each active extraction well at least once every two years or when a Party requests a meter calibration. Watermaster tests meters by volumetric or pitot tube comparisons. Watermaster notifies a Party that it must repair or replace its meter when the meter registers beyond five percent accuracy. Watermaster calculates the monthly water production for each well using the meter readings and Unit of Measure Code reported for the well that month. If the registration accuracy of the meter deviates by as much as five percent, the calculated well production could be subject to revision.

The meter testing program is managed by the Water Rights Panel. During the 2018-2019 AY, the DWR visited 46 Parties and performed 195 tests. Tests showed that 22 meters did not pass, which means the meters were either more than five percent fast or slow. Please contact the Water Rights Panel at [www.cbwatermaster.org](http://www.cbwatermaster.org), for specific information regarding meter testing.

# Water Supply

## A. Precipitation

Precipitation over the Basin has relatively minimal direct influence on the replenishment of the groundwater in the Basin. This is a result of the low soil permeability that characterizes the primary water-producing aquifers throughout much of the Basin and largely impermeable surfaces (i.e., pavement and buildings) covering most of the forebay areas. However, during years of high rainfall, increased runoff from the areas upstream of the Basin can result in increased replenishment to the Basin and decreased groundwater demand by the water users, which in turn can result in lower rates of groundwater extraction from the Basin.

During the 2018-2019 AY, the following amounts of precipitation were measured at five precipitation stations located throughout the Central Basin region:

- 17.51 inches at Los Angeles-RD241 (formerly 96th and Central)
- 19.87 inches at Montana Ranch
- 18.82 inches at University of Southern California
- 17.31 inches at La Mirada Station
- 21.54 inches at Imperial Yard

Figure 3 shows the locations of these precipitation stations, and Figure 4 shows the monthly average of the rainfall measured at these stations. Based on the total rainfall measured at these stations, the mean precipitation over the Central Basin was 19.01 inches, which is 138% of the long-term mean of 13.70 inches. The region received above average rainfall, which contributed to a slight decline in APA extractions when compared to the previous AY.

## B. Groundwater Recharge

Natural replenishment of the groundwater in the Basin occurs largely from surface flow and underflow through Whittier Narrows from the San Gabriel Valley. As mentioned above, minimal rainfall over the Basin would infiltrate into deeper aquifers of the Basin.

Intentional replenishment of groundwater in the Basin is accomplished by capturing and spreading river water at the Rio Hondo and the San Gabriel River Coastal Spreading Grounds in the Montebello Forebay (Figure 3). The sources of this replenishment water include local storm runoff, local dry weather urban runoff, imported water purchased from the Metropolitan Water District of Southern California (MWD), and recycled water purchased from Los Angeles County Sanitation Districts. There was a significant increase of 78% in "local runoff" when compared to the previous AY, which is credited to the above average rainfall received. Table 15 shows the sources and

quantities of water spread to replenish the groundwater for the 2017-2018 AY and 2018-2019 AY. Specifically, WRD purchased 5,340 af of imported water for spreading, which is 4,452 af or 45% less than the previous AY. In addition, WRD purchased 47,930 af of recycled water for spreading, which is 9,891 af or 17% less than the previous AY.

### **C. In-Lieu Replenishment**

During the 1965-1966 water year, WRD, in cooperation with the MWD, began an in-lieu replenishment program where discounted imported water was offered seasonally due to availability. WRD has contracted with producers having access to supplemental imported water that could be used in lieu of extracting groundwater from the Basin to reduce overall pumping impacts. Due to water shortages and other reasons, MWD discontinued their discounted seasonal imported water in 2011 and as a result, WRD generally suspends its in-lieu program except under special circumstances. There was no in-lieu recharge in 2018-2019 AY (Table 16).

### **D. Imported Water**

Water is imported from northern California via the State Water Project and the Colorado River, and is made available to water users by MWD through its member agencies: Central Basin Municipal Water District (CBMWD) and the Cities of Compton, Long Beach, and Los Angeles. The City of Los Angeles also imports water from the Owens River-Mono Basin. Furthermore, the California Domestic Water Company, the San Gabriel Valley Water Company, Suburban Water Systems, and the City of Whittier import groundwater from the San Gabriel Valley groundwater basin, which lies to the northeast and upstream of the Basin. In the 2018-2019 AY, a total of 103,649 acre-feet of water was imported, for potable use, to the area overlying the Central Basin. Table 17 lists imported water use by source of water, Party, and quantity, not including WRD replenishment water.

### **E. Recycled Water**

Table 18 shows that 10,366 af of recycled water for direct use was used in the area overlying the Basin during the 2018-2019 AY, not including WRD replenishment water. This amount is 2,483 acre-feet or 19% less than was used in the 2017-2018 AY.

### **F. Total Water Use**

Figure 5 shows the total water use in the Basin during the 2018-2019 AY, including extracted groundwater, imported water and recycled water for direct use.

### **G. Exported Water**

California-American Water Company exported 1,481 acre-feet of groundwater from the Basin to its service area that overlies a portion of the West Coast Basin.

## H. Increased Extraction in the Central Basin for Certain Purveyors Serving Overlying Communities

Per Section IV.K of the Judgment, “certain purveyors” are Parties to both the Central Basin Third Amended Judgment and the West Coast Basin Judgment and serve communities overlying both the Central and West Coast Basins. These purveyors, include the City of Los Angeles, Golden State Water Company, and California Water Service Company and are allowed to increase their extraction in the Central Basin beyond their APA. However, the increased extraction is counted against their Adjudicated Right in the West Coast Basin. Increased extractions are limited to 5,000 af per AY.

In the 2018-2019 AY, Golden State Water Company increased their extraction rights in the Central Basin by 1,115 af by reducing their rights in the West Coast Basin by the same amount; this is reflected in Table 1.

## I. Alamitos Gap Barrier Project

Sea water intrusion in the Alamitos Gap near the mouth of the San Gabriel River poses a threat to the groundwater in the Basin. The Alamitos Gap Barrier Project is designed to prevent sea water intrusion into the fresh water aquifers of the Basin. The location of the barrier is shown on Figure 3.

The Los Angeles County Department of Public Works operates the barrier project, which is comprised of 43 injection wells that create a groundwater pressure ridge to halt sea water intrusion. The project includes 220 observation wells that are used to monitor groundwater levels and quality in the area. Table 19 shows the quantities of imported and recycled water injected into the barrier wells in the 2017-2018 and 2018-2019 AY. There was a slight increase of 53.9 af or 2% in imported water use and a decrease of 110.3 af or 60% in recycled water use for injection. The sea water intrusion problem is contained by the Barrier Project.

## J. Groundwater Levels

Figure 3 shows the locations of selected wells that are used to monitor groundwater level elevations in the Basin. Figure 6 shows the water level elevations in key wells located in the Montebello Forebay. Figure 7 shows the water level elevations in wells perforated in Principal Aquifers of the Central Basin Pressure Area, and Figure 8 shows the water level elevation in the Los Angeles Forebay. WRD’s annual Engineering Survey and Report and Regional Groundwater Monitoring Report provide more information on groundwater levels. These reports are available on WRD’s website.

# Watermaster Administrative Costs and Budget

To fund Watermaster activities, both the Administrative Body and the Water Rights Panel have annual assessments that are levied on water rights holders under the terms of the Judgment. The Administrative Body assessment is only charged to those rights holders that have extracted from the Central Basin within the current or past two administrative years (active groundwater producers). The assessment is a flat fee of twenty dollars (\$20) for each active rights holder plus a proportion of the remaining Administrative Body budget based on the APA of the active rights holder. The separate Water Rights Panel assessment is charged to all water rights holders, not just active rights holders, based on their APA.

For 2018-2019 AY, the Watermaster budget for the Administrative Body was \$198,873; which is unchanged from the previous AY. The Watermaster budget for the Water Rights Panel was \$184,762, which is a \$10,868 decrease from the previous year. The decrease is attributed to a decrease in the Water Rights Panel assessment from \$0.90 to \$0.85 per af. The overall Watermaster budget total was \$383,634.98. Table 19 lists the budget summary of the 2018-2019 AY.

<sup>1</sup> APA - Allowed Pumping Allocation.

<sup>2</sup> Net Carryover is the sum of all carryover from the previous year less the amount of carryover conversion for the current year.

<sup>3</sup> See Table 10 for information concerning leases. Lease with flex includes carryover provisions.

<sup>4</sup> Storage includes Carryover Conversion for Administrative Year 2018-19.

<sup>5</sup> Total Rights = Allowed Pumping Allocation + Net Carryover + Leases + Storage, but does not necessarily equal Total Extraction Right (see page 5).

<sup>6</sup> Balance = Total Rights - Amount Pumped.

<sup>7</sup> DCO 77 - drought carryover created in 1977.

<sup>8</sup> DCO 91 - drought carryover created in 1991.

<sup>9</sup> 2017-18 net carryover reduced by carryover conversion for 2018-2019
