

WRD EDUCATION PROGRAM

The Water Replenishment District's Education Program offers an array of programs featuring interactive student activities that present interesting topics on the importance of groundwater, water treatment and conservation.

WRD's Education Programs include:

- In-classroom visits
- Science Night
- Treatment Facility tours
- Health Fairs
- Eco Gardener classes
- Calendar Contest
- Annual Groundwater Festival

Albert Robles Center for Water Recycling & Environmental Learning (ARC)

ARC immerses students and teachers into a dynamic and interactive environment where they are introduced to a wide breadth of water topics. The program builds on visitors' prior knowledge of, and everyone's daily connection to, the water cycle with specific attention to groundwater and recycled water. Students are challenged to analyze the information presented and use critical thinking skills to propose conservation and/or engineering solutions to the problems or issues. ARC also incorporates career development in which students and teachers will gain exposure to, and exploration of, water careers with varying levels of educational requirements. Contact us to schedule your next tour at the Albert Robles Center!

For more information, please contact: Monica Sijder at msijder@wrld.org or at 562-275-4234

All activities support the Common Core State Standards and the Next Generation Science Standards.
