

## WHO IS WRD?

The Water Replenishment District (WRD) is the largest groundwater agency by population in the state of California, managing and protecting local groundwater resources for four million residents.

## WHERE DOES YOUR WATER COME FROM?

Visitors can explore how humans use technology to tap into the natural watercycle and gain an appreciation for the work and infrastructure that brings them safe, clean, reliable water every day.

## RECYCLED WATER

Innovative technologies utilized at the AWTF purify 10,000-acre feet (3.25 billion gallons) of tertiary-treated recycled water per year which is then discharged to the San Gabriel River Spreading Grounds for regional groundwater replenishment.
